

Predictive Fleet Analytics

How much vessel data and insight do you have?

See what's coming

Accurately tracking vessels, predicting ship movements and understanding port congestion are all crucial tasks across a number of jobs in your sector. But, these activities may be more difficult than they need to be. To better understand the areas of improvement within your existing solutions, simply answer our questions below...

Question 1

Do you know the estimated time of arrival (ETA) of all your vessels?

36% of AIS messages are missing estimated time of arrival data.

Question 2

Can you confirm the estimated time to berth (ETB) of all your vessels?

Question 3

What is the **estimated time to departure** (ETD) of all your vessels?

Question 4

Are you (or your colleagues) **wasting time compiling ETA/ETB/ETD information** from multiple sources?

Question 5

Is manual data entry **tying up valuable human resources** that could be better spent elsewhere?

40% of destination data can't be matched to a port due to human error in manual entry.

Question 6

Does your ETA/ETB/ETD information **rely on anecdotal information** or is it based on accurate data points?

27% of vessels didn't arrive within a day of their published ETA.

Question 7

Do you have the single view and accurate data needed to make confident data-driven decisions in your business?

Question 8

Can you see potential delays, port congestion issues and reasons behind the disruptions without depending on shipping agents and brokers?

Question 9

Are you able to **access insights such as predicted arrival data of competitor vessels** (at least 2 days in advance), enabling you to know which vessels are heading where, and allowing you to document trading patterns?

Question 10

Can you see **all the vessels** on a route?

Experience a central point of truth

Predictive Fleet Analytics delivers a new level of reliable and accurate data. The analytics will help you better predict port congestion and delays with self-serve insights not available elsewhere.

Using artificial intelligence, the platform and API will provide predictive vessel movements, vessel estimated arrival times to port, berth information and estimated departure time – all in one place. With Predictive Fleet Analytics, you can make accurate decisions in real time, redeploy resources, cut costs, and stay ahead of your competition.
