

Increase your trial success with the leading global investigator and site intelligence

Identify the best sites and investigators with the right experience, availability and patient pools

- **Optimize clinical trial site selection** and expand your network of potential investigators
- **Revolutionize your investigator selection process** with our prioritization mechanism, along with real-world patient data
- **Mitigate against the risk** of selecting low or non-enrolling sites
- **Easily find the most qualified investigators** in the geographical locations that best suit your trial needs
- **Pinpoint US investigators with specialized physicians in proximity**, who have known patient pools, to lay the groundwork for US patient referral centers

Expertise on call – personalized, actionable intelligence exclusively for subscribers, including assistance with customized data collection and analysis

Rapid responses – 1-business day response time to support your decision-making that can't wait, with transparent methodology and source citation

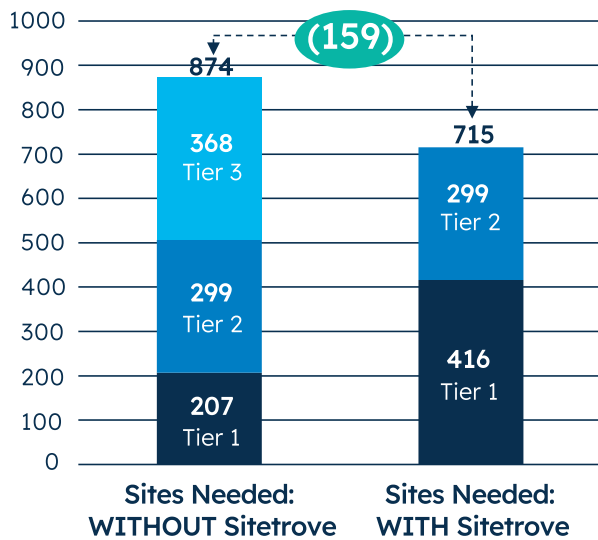

Expanded research support – platinum clients can leverage content from the full Pharma Intelligence portfolio beyond Citeline

Delivering unmatched investigator and site coverage

- **Build Highly Specific Searches:** Use targeted criteria to save time and make data-driven site and investigator selections, based on experience and patient networks
- **Automatic and Timely Notifications:** Be notified of trial status changes and investigator commitments to competitor trials
- **Map Visualization:** Analyze the global distribution and density of experienced investigators and clinical organizations in one dynamic, interactive visual
- **Real-World Data:** Inform your site and investigator selection with patient and physician proximity information

See how recruiting the best investigators for your trials can save you \$millions

This case study shows how a sponsor company could have used Sitetrove's Investigator Prioritization feature to focus on Tier 1 & 2 investigators over Tier 3 investigators.

How could this translate into direct cost savings?

$$\text{\$30,000} \times 159 = \text{\$4.7M}$$

start up cost per site
(conservative estimate)
